EMMANUEL BASSEY

Health Data Analyst | Excel • Power BI • SQL • Tableau • Python • R

Remote (UTC+1) | Open to global remote roles: GMT, WAT, CET & EST, UTC

Email: emmanuelinemesit906@gmail.com

Phone: +234 708 879 4161

LinkedIn: https://linkedin.com/in/bassey-emmanuel

Portfolio: https://emmanuelinemesit906-dev.github.io/emmanuelbassey.github.io/

PROFESSIONAL SUMMARY

Health Data Intelligence Analyst specializing in transforming fragmented clinical datasets into high-impact decision tools. Proven track record in automating ETL workflows and designing interactive dashboards (Alzheimer's, Oncology, Public Health) that bridge the gap between complex data and executive action. Expert in HIPAA/GDPR compliance and resource optimization

CORE COMPETENCE & HEALTH INFORMATICS

Technical Pillar	Health-Specific Application
Data Visualization	Building Clinical Dashboards in Power BI & Tableau to track patient outcomes, bed occupancy, and disease prevalence.
Statistical Analysis	Utilizing R and Python for epidemiological modeling, risk segmentation, and identifying clinical outliers.
Data Governance	Ensuring all ETL processes and SQL queries comply with HIPAA, GDPR, and NHIA (National Health Insurance Authority) standards.
Reporting Automation	Developing automated KPI Scorecards for public health surveillance and pharmaceutical supply chain tracking.

TECHNICAL SKILLS

- Data Visualization: Power BI (DAX, Power Query, Interactive dashboards), Tableau (Interactive dashboards), Microsoft Excel (PivotTables, Charts)
- Databases: SQL (Joins, CTEs, Aggregations, Window Functions), Data Modeling, Data Quality
- Programming: R (Exploratory Data Analysis (EDA), Data Visualization)
- Analytics: KPI Development, Reporting Automation, Data Cleaning, Data Annotation
- Tools: GitHub, Zoom, Google Workspace, Google Meet, Slack

PROFESSIONAL EXPERIENCE / PROJECTS

Alzheimer's Disease Analytics Dashboard – Public Health Data Analysis

Power BI | Excel | Power Query | DAX

- **Advanced Comparative Analysis:** Developed a Power BI tool for neuro-imaging and cognitive indicators, enabling users to identify high-risk patient clusters with 20% greater efficiency.
- **Stakeholder-Centric Design:** Integrated complex DAX measures with intuitive visual storytelling and custom tooltips to simplify clinical data interpretation for non-technical leadership.
- **Strategic Insights:** Isolated longitudinal patterns in patient data, providing actionable intelligence to support clinical research and resource allocation decisions.
- **Data Pipeline:** Streamlined data transformation using Power Query to ensure real-time accuracy of diagnostic KPIs.
- See project in portfolio above

Smoking Health Risk Analysis Dashboard – Public Health Data Analysis

Power BI | Excel

- **Predictive Risk Modeling:** Created a demographic-based risk-segmentation model, providing public health officials with a visual roadmap for high-priority intervention strategies.

- **Demographic Granularity:** Synthesized disparate datasets to visualize the correlation between smoking behaviors and chronic health risk indicators across age, gender, and socioeconomic status.
- **Outcome Optimization:** Enhanced clarity of health outcomes through interactive summary dashboards, reducing the insight-to-action gap for public health decision-makers.
- **Automated Reporting:** Built a scalable reporting framework in Excel and Power BI to monitor shifting health trends across multiple public health sectors.
- See project in portfolio above

Brain Tumor Diagnostic & Classification Analysis

Python | SQL | Power BI

- **Clinical Data Architecture:** Processed and normalized complex oncology datasets, ensuring high-fidelity data quality for diagnostic modeling of various tumor classifications (e.g., Glioma, Meningioma, Pituitary).
- **Predictive Feature Engineering:** Identified and isolated key diagnostic biomarkers and patient demographic variables that correlate with tumor progression and survival rates.
- **Performance Optimization:** Developed a classification model that achieved 9x accuracy rate in differentiating between tumor types, significantly reducing potential manual screening errors.
- **Stakeholder Visualization:** Engineered an interactive dashboard to visualize tumor growth patterns and localization, providing oncologists with a "single source of truth" for patient case reviews.
- **Health Compliance:** Maintained strict data governance protocols in alignment with HIPAA and GDPR standards to ensure the ethical handling of sensitive patient diagnostic records.
- See project in portfolio above

Global CO2 Emissions & Public Health Impact

Excel | Tableau

- **Environmental Health Mapping:** Designed an interactive Tableau dashboard to track CO2 trends, specifically highlighting regions where high emission levels correlate with increased risks for respiratory and chronic health conditions.

- **Macro-Trend Analysis:** Identified long-term emissions growth patterns across major economies, providing a data-driven foundation for assessing future public health infrastructure needs.
- **Outlier Detection:** Utilized advanced filtering and outlier analysis to pinpoint countries with disproportionate emission-to-population ratios, signaling potential "hotspots" for environmental health intervention.
- **Data Synthesis:** Managed complex, multi-year global datasets to deliver high-level executive summaries on the intersection of industrial output and environmental sustainability.
- See project in portfolio above

EDUCATION

Bachelor's Degree in Biochemistry

University of Uyo, Uyo, Nigeria

2019 – 2024

CERTIFICATIONS

- Google Professional Data Analytics Certificate
- AI in Analytics
